

# LOAD-RITE

## GALVANIZED TRAILERS

### roller trailers

Custom articulated aluminum extrusions

Single axle roller models smooth out loading and launching procedures. Available with brakes and sized to fit smaller to medium 16' to 22' boats up to 3,600 lb. capacity.

Fully articulated roller assemblies conform to any hull for maximum roller contact.

Classic styling combined with smooth loading and launching, tandem axle roller models are sized to fit medium sized boats 19' to 28' and up to 9,700 lb. capacity.

### TPR Rollers

**Thermal Plasticized Rubber**  
Featured on every Load Rite® roller trailer, TPR combines all the best qualities of rubber, polyurethane, and plastic.

- >Soft, gentle, and long lasting
- >Resilient at all temperatures
- >Non-marking
- >Smooth, Delrin® roller bushing (patent pending)
- >Easy launch and load

### bunk trailers

**S.A. Bunk®** models utilize a unique, Self-Adjusting design to give superior hull conforming support, easier float-on loading and stronger, independent steel bracketry that eliminates the problem of broken long-span wooden bunks.

Bunks swivel on patented aluminum bushings and mount to galvanized steel tubes that pivot fore and aft.

Single axle v-bunk models offer minimal adjustment and trailering simplicity. Available with brakes in models sized to fit 12' to 22' boats up to 3,600 lb. capacity. Shown with optional tongue jack and Quick-Slide® bunk covers.

Tandem axle SA® bunk models combine the best of all worlds: support like a bunk with launch and load characteristics similar to roller models. Sized to fit 19' to 26' boats up to 5,800 lb. capacity.

Load Rite® highly recommends

**Quick Slide**

bunk covers for all bunk trailers.
